

Cardboard

Workflow learning into useful content

Identify the work that needs help.
Keep the editor that already works.

Research → exploratory learning → articles + evaluation copy → proposed tests

A specific offer inconsistency, with an unmeasured business effect

3

checked official articles

Offer claims differed from the inspected pricing display or from one another.

WHAT THIS ESTABLISHES

Information needs reconciliation.
Confirm the source of offer truth.

No measured buyer confusion, conversion loss or revenue effect.

WHAT TO TEST NEXT

Can a relevant reader explain access
and choose a truthful next action?

Discovery is a bounded inventory, not a market-wide visibility verdict

20

Google observations

Original field-note cohort

12

ChatGPT observations

Completed; mixed settings

72

Source records

Inventory, including rereads

Separate India / English check: 5 queries, 92 captured headings

0 owned Cardboard headings; 1 third-party YC result

Incomplete original Google retention; mixed AI cohorts. No universal invisibility or ranking trend.

Different production stages need different kinds of help

Planning + graphics

Ideas, storyboards and interface preparation

Animation + polish

Timing, easing, sound and precise creative control

Corrections + handoff

Editable structure, assets and access matter

Incumbent fit

AI assistance can coexist with manual finishing

Useful context, not screened SaaS-buyer validation or evidence of Cardboard performance.

EX01: what the replies helped us learn

Workflow

Planning, animation and finishing need different help.

Switching considerations

Control, editability and setup matter when comparing methods.

Cardboard opinions

Keep stated non-use separate from opinions and ambiguous use.

Enough to guide the content. Product performance and purchase intent remain unknown.

Actual replies changed the first article. The aid revision remains an untested prototype.

BEFORE: A GENERAL CHOICE FRAME

Ask whether a different editor would help with a real recent video.

Correction and output checks were present, but less stage-specific.

AFTER: DIAGNOSE THE STAGE

Separate planning, source footage, assembly, motion and finishing.

Distinguish useful craft from rework.
Inspect editability and whole-project fit.

Reply-informed editorial revision; no demonstrated reader effect or executed aid feedback.

Five task-specific articles and a complete evaluation-page copy sample

- 01 Choose a workflow without assuming a switch
- 02 QA a recorded SaaS product demo
- 03 Inspect an editable AI-video handoff
- 04 Compare Cardboard and Descript by workflow
- 05 Adapt one demo feature for LinkedIn

PAGE SAMPLE

**One feature.
One
explanation.**

Inputs → first cut →
correction → export
checks

Unpublished. Illustrative storyboard, genuine-proof requirements and truthful access links.

Measurement follows delivered value, not activity alone

Awareness	Fixed query/prompt observations, not market share
Acquisition	Eligible route sessions and explicit evaluation actions
Activation	User-confirmed useful delivery
Retention	Another distinct job; cadence still unknown
Revenue	Settled paid access; refunds and net revenue separate
Referral	Attributable new account reaching useful delivery

6 stages / 12 proposed event contracts. No instrumented events, company baseline or growth result.

Test comprehension first. Product proof and commercial impact come later.

EX02 Page comprehension

Can readers identify the task, proof and next action?

EX03 Offer comprehension

Only after company-confirmed terms and relevant confusion.

EX04 Genuine correction comparison

Same inputs; record all work, failures and access constraints.

Then EX05 article usefulness and EX06 company-route testing. Proposed; no result or uplift forecast.

HANDOFF

A reviewable contribution, with clear ownership and limits

TITASH

Set scope, challenged switching assumptions and directed the work-sample decisions.

AI ASSISTANCE

Public research, synthesis, drafting, editorial correction and package checks.

Next business action: authorized founder handoff with usable access

Then company/editor review, confirmed proof and terms, and prioritized testing.

Pitch is UNSENT. No affiliation, product access, completed validation or company outcome claimed.
